## Occupations

**Data Engineers**
Develop, construct, test and maintain architectures, such as databases and large-scale processing systems.

Learn More

**Database Architects**
Design strategies for enterprise databases, data warehouse systems, and multidimensional networks. Set standards for database operations, programming, query processes, and security. Model, design, and construct large relational databases or data warehouses. Create and optimize data models for warehouse infrastructure and workflow. Integrate new systems with existing warehouse structure and refine system performance and functionality.

Learn More

**Data Consultants**
Identify, prioritize, and undertake a range of research and analytical activities leveraging all available data assets to help solve complex business problems through the development and application of advanced statistical modeling techniques.

Learn More

**Blockchain Developers**
Design, implement, and support a distributed blockchain-based network. Analyze requirements, design blockchain technology based on the business model, and build and launch a blockchain network.

Learn More

**Data Scientists**
Develop and implement a set of techniques or analytics applications to transform raw data into meaningful information using data-oriented programming languages and visualization software. Apply data mining, data modeling, natural language processing, and machine learning to extract and analyze information from large structured and unstructured datasets. Visualize, interpret, and report data findings. May create dynamic data reports.
